1. Task tray

When you close the program window, the program will minimize itself into the task tray as a small icon next to the clock. Right-click the icon to show the context menu.

Show

Shows the program window.

Enable/Disable Autostart

Use this option to auto-run the application with Windows and to ensure permanent file monitoring.

Exit

Closes the program.

2. Dashboard

Dashboard

Backup plans in total:

1 

Backup plans with errors or warnings:

0 

Backup plans active:

0 

No backup plans activated yet.

You will find your plans separated by status here. Click a tile to navigate to the associated program section.

3. Your plans

Your Plans

Here you can see and edit your created Backup plans!

Filter: No file type filter set.

 Aktionen

Activate

Log notifications: 0

More info 

Plans you created are listed here. Click "Activate" to start monitoring the designated folder.

Log notifications

The number of current status/error message is shown here. Click it to reveal further details.

More info

The paths to monitored and target folder is shown here. Click a path to open it in Windows Explorer.

Aktionen

These features are only available for plans in idle state.

Restore

Customize

Allows you to modify all plan settings except the number of backup archives to keep.

Log notifications

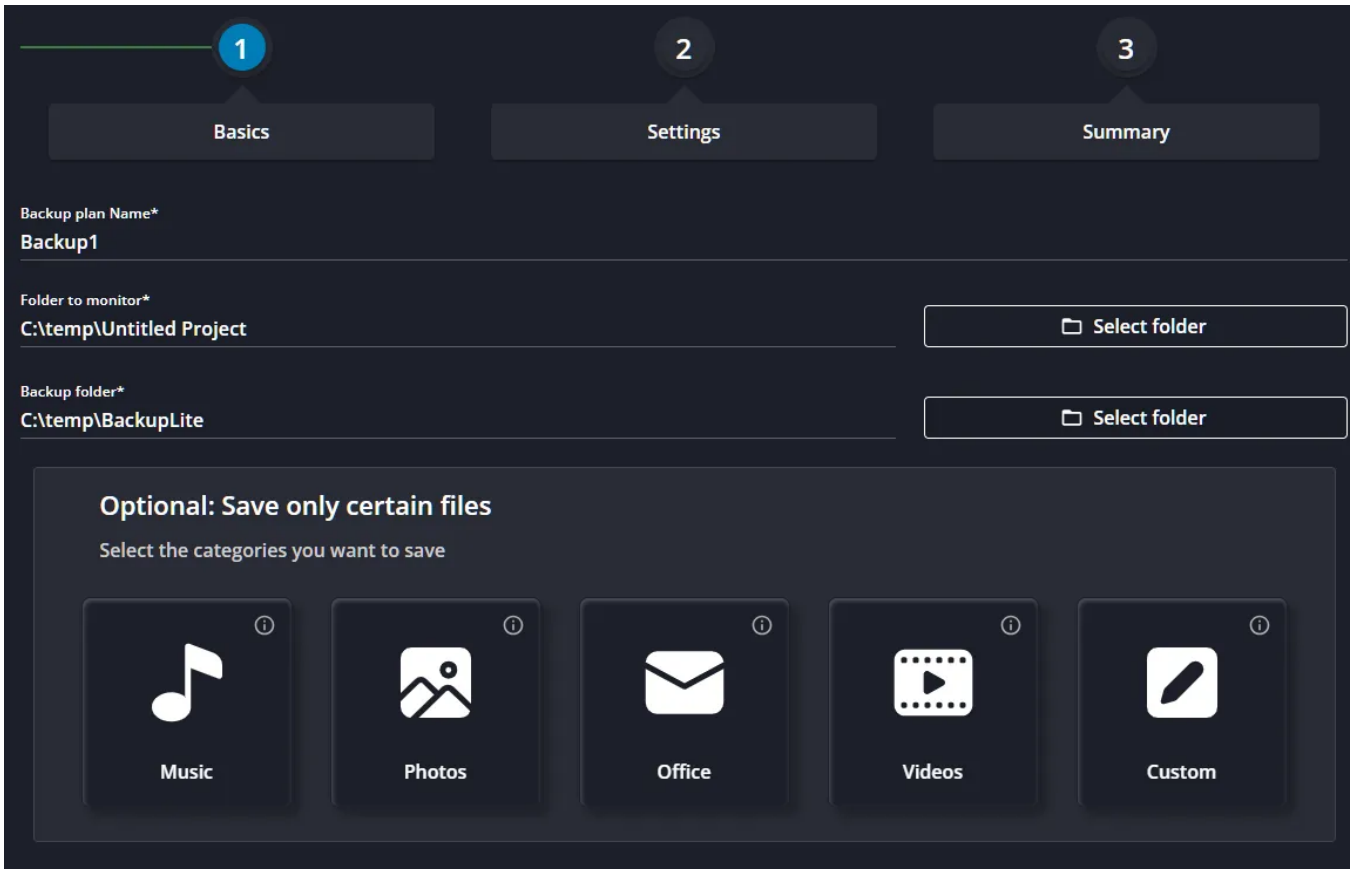

Displays details on current status/error messages related to the plan.

Delete

Deletes the affected plan after confirmation.

4. New plan

4.1 Basics

Specify name, source and target folder for the backup archives here. Note that source and target folder must not be identical!

Filter by file type

By default, all file types are backed up. You can limit backups to certain file types using the provided category tiles or create a custom category via "Custom".

Click a tile to toggle between active/inactive state for a category. Alternatively, click the X at the bottom behind the category name to set it to inactive.

Once a category is set to active, the program will only back up files that match the active categories. Click the info icon in the top left corner of a tile to display the affected file types.

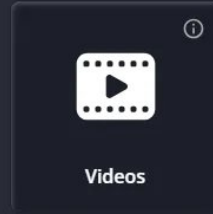

Custom

Once activated, a textfield will appear below the tile. Fill in the file extensions separated by semilocons that the backup plan will accept e.g., "html;css;js" to include common web files.

Optional: Save only certain files

Select the categories you want to save

Enter a file ending like: txt

e.g.: txt;pdf;mov

4.2 Settings

The program creates a new backup archive every day and reuses previous archives depending on the specified total number of archives.

Overwrite files in backup

If enabled, files in the backup archive will be overwritten every time the source files change. Otherwise, a new copy of the modified file will be created, and the previous file kept.

Delete files in backup

If enabled, deleting a file in the monitored folder will also delete the copy of the file in the backup archive.

Exclude hidden files

Enable this option to exclude hidden files from backup archives.

Exclude temp files

Enable this option to exclude temporary files, often created by running applications, from backup archives.

4.3 Summary

The screenshot shows a configuration window with three steps: 1. Basics, 2. Settings, and 3. Summary. The Basics section includes Backup plan Name (Backup1), Folder to monitor (C:\temp\Untitled Project), and The Path where the backup should be saved (C:\temp\BackupLite). The Settings section includes Backups that should be kept (10), Overwrite files in backup (No), and Delete files in backup (No). The Save specific file types section includes Exclude hidden files (Yes), Exclude temp files (Yes), and Filter (No file type filter set).

Basics	
Backup plan Name	Backup1
Folder to monitor	C:\temp\Untitled Project
The Path where the backup should be saved	C:\temp\BackupLite

Settings	
Backups that should be kept	10
Overwrite files in backup	No
Delete files in backup	No

Save specific file types	
Exclude hidden files	Yes
Exclude temp files	Yes
Filter	No file type filter set.

Finally, you'll see a summary of your plan's settings. Click "Finish" to apply them.

5. Program settings

Autostart

Enable this option to automatically launch the application upon system startup. The application, however, remains in the background until manually opened.

Tray

When this option is activated, the application minimizes to the tray at the bottom right of the taskbar upon closure, instead of closing directly.

Language

Here, you can select the language for the application.

Compression level

Specify the degree of backup compression here, where 1 indicates no compression, 5 is the default setting, and 9 represents the maximum compression.

Big files

Choose whether a warning should appear when processing large files (over 2 GB).

Skin

Customize the design of the program interface according to your preferences here.
