1 Installing Language Packs

1.1 Translation via English:

For many translations, the program works in two steps. If you want to translate texts from German to Spanish and vice versa, the following process is used:

- 1. German \rightarrow English: Install the "DE \rightarrow EN" package.
- 2. English \rightarrow Spanish: Install the "EN \rightarrow ES" package.

For the return path:

- 3. Spanish \rightarrow English: Install the "ES \rightarrow EN" package.
- 4. English \rightarrow German: Install the "EN \rightarrow DE" package.

By the end, you will have installed four language packs to enable translation in both directions.

1.2 Direct Translation:

Some languages can be translated directly. In this case, you only need two language packs for both directions (for example, Spanish \rightarrow Portuguese & Portuguese \rightarrow Spanish).

2 Initial Setup

Welcome to LocaLingo!

It seems like this is your first time starting this Application. To use this App you have to select and install at least 2 language packages.

Availabl	le languages		Search
	≓ From	≓ То	i
	Albanian	English	
	Arabic	English	
	Azerbaijani	English	
	Basque	English	
	Bangla	English	
	Bulgarian	English	
	Catalan	Enqlish	
			🗾 ashampoo

When starting the application for the first time, you must install at least **two languages** to complete the setup. Select the desired languages and click "**Download Selection & Continue**" to begin the installation.

Use the **search field** to find specific languages or sort the list alphabetically using the sorting symbol.

Once the installation is successful, the initial setup is complete, and you can start using the application.

3 Homepage / Translation Page

Here, you can **quickly and easily** translate text or files.

3.1 Text Translations

- 1. Enter the text you want to translate into the **left field** and select the source language.
- 2. Alternatively, paste the text from your clipboard using Right Click \rightarrow Paste.
- 3. Select the target language in the **right field**.
- 4. Start the translation by clicking "Translate" or using the shortcut `CTRL + Enter`.

Note: Selecting "Auto" does **not** guarantee an accurate detection of the source language. If there is too little text or the correct language packs are missing, detection may fail.

	n ashampoo

3.2 File Translations

- 1. Select the **target language** and optionally the source language.
- 2. Click "Translate File" and choose a file.
- 3. Confirm the translation dialog if the language settings are correct.
- 4. Once completed, you can download the translated file via "**Download File**", which will open in your default browser.

Supported file formats: .txt, .odp, .odt, .docx, .pptx, .epub, .html

Your file never leaves your PC. The download occurs via the browser only because this is a browser-based application.

UPDATE ALL 💠 UNINSTALL SELECTED 🔟	DOWNLOAD SELECTED 🛓

An active internet connection is required to install and update languages.

Click on the **download icon** to access the language management page. Here, you can view installed and available languages:

- Search & Filter: Use the search field to filter the list.
- Install new languages: Click the download icon next to a language.
- Multi-selection: Select multiple languages at once to install or remove them.
- Updates: If updates are available for installed languages, a blue update icon will appear. Click "Update All" to install the latest language packs.

Warning: If you remove languages and fewer than two remain, the app will reset, deleting all remaining languages. You will then be redirected to the initial setup.

5 Change Application Language

Click on the **burger menu** in the top bar to change the application language. There, you will also find a link to the **help page** and **additional information** about the program.
